Over the past thirty years the world of work has faced the same problems: galloping unemployment, the increasing difficulty for the young in finding a job despite so many retirements, the number of people having to work part-time while others struggle to cope with their daily workload... Globalisation and developing technology have triggered some major changes. What should we be doing about it, at a time when the ecological challenges are becoming crucial? The time has come to reconsider the way that we address together the issues of work.
